MHOP data collection: example sheet

Diree Godana Teaching Hospital · Under the clinical direction of Dr Godana Jarso, MHOP Clinical Lead · **Example data only, not real patients**

ONE ROW = ONE PATIENT ON ONE DAY. Always fill the card number (or MK number), date of birth and visit date. Test not done = leave the cell EMPTY. Not sure? STOP and ask Dr Godana.

1 Green tab "VISITS – enter data here" (only some columns shown)

	PATIENT (every row)				ONLY IF NO MHOP ID			GLYCAEMIC		BODY		CLINICAL MARKERS		LIFESTYLE	BEHAV.	…
Row	mhop_id	mrn card no. or MK no.	dob	entry_date	sex	stage	enrolment_date	hba1c_mmol	fasting_glucose	weight_kg	bmi	bp_systolic	bp_diastolic	daily_steps	phq9_score	
3	MHOP-DG-00007	00123	1975-03-09	2026-11-06				44	6.4	72.4	27.1	132	84	8500	5	
4	MHOP-DG-00007	00123	1975-03-09	2026-12-04				41								
5		MK-0012	1962-07-15	2025-03-10	Female	B - Type 2 diabetes	2025-03-10	52	7.8	81		145	92			

Row 3 Patient **with** an MHOP ID. All results from the **same day** go on **one row**. Orange columns stay empty.

Row 4 Same patient, **another day** = a **new row**. Only HbA1c was done, so every other cell stays **empty**.

Row 5 Old record, **no MHOP ID** and **no hospital card**: write their **MK number** (MHOP key), leave mhop_id **empty**, fill the **orange** columns.

2 The orange "stage" column

The patient's diabetes stage on the day they **joined MHOP**. **The doctor decides it.** Copy it from the clinical file. Not written? Ask Dr Godana.

- **A** Prediabetes: blood sugar raised, **not** diabetes yet
- **B** Type 2 diabetes (confirmed)
- **C** Advanced type 2 diabetes: very little own insulin

3 Write it like this

Number	✓ **6.4**	× 6.4 mmol/L × <6.4
Big number	✓ **8500**	× 8,500
Date (year-month-day, European calendar)	✓ **2026-11-06**	× 06/11/2026 × Ethiopian date
Test not done	✓ **empty cell**	× NA × 0 × -
Choice (cell with an arrow ▾)	✓ **choose from the list**	× your own words
Card number / MK number	✓ **00123 or MK-0012, same every time**	× 123 one day, 00123 the next

No hospital card number? In the **old patient spreadsheet** (it stays in the hospital), add a column "MHOP key" and give each patient a number once: **MK-0001, MK-0002 …** (MK = MHOP key). Write that number in the card-number column. Same patient = same number, always. **Never** write names in the VISITS file.

Finished? Save as MHOP_visits_DATE_INITIALS.xlsx → send to Dr Godana and the Programme Lead (secure route). Red warning box = check the paper.
